SUMMARY

Full-Stack Software Engineer with production experience across the stack - building responsive front-end interfaces (React, JavaScript/ES6+, HTML5, CSS3) and scalable backend microservices and RESTful APIs, containerized with Docker and deployed on Kubernetes. Strong grounding in microservices architecture, relational databases, and testing, with a track record of owning services end-to-end - design, implementation, testing, and production support while collaborating closely with design and product teams in an Agile environment.

SKILLS

- Languages: JavaScript (ES6+), TypeScript, Python, SQL, Java (academic), HTML5, CSS3
- Front-End: React, responsive UI development, HTML5, CSS3
- Back-End & APIs: FastAPI, Node.js, Express.js, RESTful API design, microservices architecture
- Databases: MySQL, PostgreSQL, Redis, data modeling, ORM-based data access
- Cloud & DevOps: Google Cloud Platform, Docker, Kubernetes, Git, CI/CD, Agile/Scrum
- Engineering Practices: unit & integration testing, code review, debugging & root-cause analysis

EXPERIENCE

Software Engineer 2 | Walmart Global Tech, Bangalore

Jan 2025 - Present

- Build backend microservices and RESTful APIs (Python/FastAPI, Node.js) on Kubernetes for a low/no-code DAG creation platform and an internal scheduling & alerting service used across teams.
- Automated migration of thousands of DAGs across platform versions using Python and GCP APIs, cutting per-DAG migration time from ~40 to 15 minutes.
- Diagnosed compatibility issues blocking MFA enforcement across 5,000+ DAGs in 7 markets ahead of a 14-day org-wide deadline; engineered a fix ensuring forward and backward compatibility.
- Own the watchdog-svc microservice powering opt-in reliability alerts on scheduled data pipelines - built the triggering, lifecycle, and data-integration layer, coordinating with an ML team on the detection model.
- Own scale and reliability for the platform's delivery pipeline - built the ingestion API and automated LLM-based change-summary generation, and ensured lakhs of alert deliveries reach thousands of internal users daily with zero dropped or duplicate sends (idempotent processing, retry/backoff).
- Built a reusable SSO authentication middleware (Node.js) as a shared service, cutting new-app auth setup effort by ~80%, and set up CI/CD pipelines for the platform's microservices.

Research and Development Intern | IIT Madras, Chennai

Jan 2024 - July 2024

- Designed and implemented a desktop GUI (Electron, React.js, Node.js) for a Vessel Management System, consolidating multiple backend endpoints and streamlining operations.
- Built REST APIs and a React Native application to enable real-time, reliable data transmission between sailors and navigating officers.

EDUCATION

SRM Institute of Science and Technology, Chennai

BTech, Computer Science and Engineering | Sept 2020 - June 2024

AWARDS

- Walmart Bravo Award - recognized as an early adopter of GenAI within the team and for proactively building automation tools from the ground up.
