Experience

[Walmart Global Tech](#) | Software Engineer 2

Bangalore, India • Jan 2025 – Present

- Built a full-stack, LLM-powered Airflow DAG generation platform using React, FastAPI, and Google ADK, enabling users to create workflows through a conversational interface with retrieval-augmented generation and agentic orchestration in production.
- Developed an ML-powered natural-language analytics assistant (Walmart AI Hackathon) using LangChain-backed pipelines, allowing business users to query data insights conversationally.
- Engineered core components of DannY (3-engineer team), a self-serve scheduling and alerting platform that turns analysts' ad-hoc KPI queries into recurring reports and threshold alerts; its engine processes 50K–60K daily email deliveries with zero duplicate or lost deliveries, validated through fault-injection testing with 20% injected faults.
- Built DannY's watchdog service with ML-based anomaly detection across multiple sensors; owned automated unit and integration testing, Kubernetes deployments using Docker and CI/CD, and production debugging of scheduling, delivery, API, and performance issues.
- Diagnosed compatibility blockers preventing MFA enforcement across 5,000+ Airflow DAGs in 7 markets, enabling backward and forward-compatible enforcement within a 14-day compliance deadline.
- Automated migration of thousands of Airflow DAGs across platform versions using Python and GCP APIs, reducing migration time from ~40 to ~15 minutes per DAG.
- Developed reusable Node.js SSO middleware that reduced authentication setup effort for new applications by ~80%; established CI/CD pipelines for platform microservices.

[IIT Madras](#) | Research and Development Intern

Chennai, India • Jan 2024 – July 2024

- Designed a desktop GUI (Electron, React.js, Node.js) for a Vessel Management System, consolidating multiple backend endpoints, and built REST APIs plus a React Native app for real-time data transmission between sailors and navigating officers.

Skills

[Languages & Frontend](#): Python, JavaScript (ES6+), SQL, React.js, Tailwind CSS, HTML5/CSS3

[Backend & APIs](#): FastAPI, Node.js, Express.js, RESTful API Design, Microservices Architecture

[Gen AI & LLM](#): LangChain, Google ADK, RAG Architectures, Prompt Engineering, Agentic Workflows

[Data & Infra](#): PostgreSQL, MySQL, Kafka, Redis, GCP (Dataproc, GCS), Docker, Kubernetes, CI/CD, Git

Projects

[Kado](#) | [kado.studio](#)

2025

- Solo-building an AI-native platform that helps marketing agencies plan, create, and launch ad campaigns faster. (TypeScript, React, Node.js, Prisma, GCP Cloud Run, Claude API)
- Designed the orchestration engine: a durable workflow executor chaining 14+ steps (brand scraping, AI copy and image generation, human-in-the-loop approval gates, Meta Ads publishing, performance sync), using a clean-architecture split that isolates business logic from Prisma, the Meta API, and AI providers.
- Built the Meta Ads publishing pipeline end-to-end (campaign → ad set → creative), with objective-specific optimization-goal mapping and a self-healing recovery path for stale or orphaned ad-account links.

Education

[SRM Institute of Science and Technology, Chennai](#) | B.Tech, CSE

Sept 2020 – June 2024

Awards

[Walmart Bravo Award](#) — Recognized as an early adopter of GenAI and for proactively building automation tools from the ground up, driving measurable impact on developer productivity and AI adoption across the data organization.
