PROFESSIONAL SUMMARY

Full-Stack Software Engineer with 1+ year of production experience building scalable backend microservices, responsive React frontends, and Generative AI applications. Shipped LLM-powered tools using LangChain, Google ADK, and RAG pipelines, and delivered enterprise-scale platform work including MFA enforcement across 5,000+ DAGs in 7 markets. Strong ownership mindset translating ambiguous business needs into production-ready solutions in fast-paced Agile environments.

SKILLS

Languages & Frontend: Python, JavaScript (ES6+), SQL, React.js, Tailwind CSS, HTML5/CSS3

Backend & APIs: FastAPI, Node.js, Express.js, RESTful API Design, Microservices Architecture

Gen AI & LLM: LangChain, Google ADK, RAG Architectures, Prompt Engineering, LLM Evaluation, Agentic Workflows

Data & Infra: PostgreSQL, MySQL, Redis, GCP (Dataproc, GCS), Docker, Kubernetes, CI/CD, Git

EXPERIENCE

Walmart Global Tech | Software Engineer 2

Bangalore, India • Jan 2025 – Present

- Built an AI-powered low/no-code **DAG creation platform** (React, FastAPI, Google ADK) enabling users to generate Airflow workflows through a conversational LLM interface, applying RAG-style retrieval and agentic workflows in production.
- Developed an ML-powered natural-language analytics assistant (**Walmart AI Hackathon**) using LangChain-backed pipelines, allowing business users to query data insights conversationally.
- Architected Danny's **scheduling and alerting engine** guaranteeing zero duplicate/lost deliveries across ~50K–60K daily emails, validated under 20% injected fault scenarios with zero drops in production.
- Built Danny's **watchdog service**, integrating ML-based anomaly detection across multiple sensors covering different data-quality issues, in collaboration with an ML team.
- Diagnosed compatibility blockers preventing **MFA enforcement across 5,000+ DAGs in 7 markets**; engineered framework-level fixes ensuring forward/backward compatibility, delivering compliance within a 14-day deadline.
- Automated migration of thousands of DAGs across platform versions using Python and GCP APIs, cutting per-DAG migration time from ~40 to 15 minutes.
- Built a reusable **SSO middleware** (Node.js) cutting new-app auth setup by ~80%, and set up CI/CD pipelines for the platform's microservices.

IIT Madras | Research and Development Intern

Chennai, India • Jan 2024 – July 2024

- Designed a desktop GUI (Electron, React.js, Node.js) for a **Vessel Management System**, consolidating multiple backend endpoints, and built REST APIs plus a React Native app for real-time data transmission between sailors and navigating officers.

PROJECTS

Kado | [kado.studio](#) • 2025

- Solo-building an AI-native platform helping marketing agencies plan, create, and launch ad campaigns faster — owning workflow design, product development, and live publishing integrations end-to-end. (*TypeScript, React, Node.js, Claude API*)

Danny • 2025

- Self-serve scheduling and alerting platform (Walmart, 3-engineer team) letting data analysts convert ad-hoc KPI queries into recurring reports and threshold-based alerts (e.g. "alert me when this metric drops below X") delivered via email on custom cadences. (*Python, FastAPI*)

EDUCATION

SRM Institute of Science and Technology, Chennai | BTech, Computer Science and Engineering

Sept 2020 – June 2024

AWARDS

Walmart Bravo Award — Recognized as an early adopter of GenAI and for proactively building automation tools from the ground up, driving measurable impact on developer productivity and AI adoption across the data organization.
